Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

NCSI Case No. 90-08

Summary

This report is an in-depth, off-scene vehicle accident study involving a 1990 GEO Storm (equipped with a Supplemental Inflatable Restraint system) involved in an impact with a tree. The accident occurred on [REDACTED], 1990, at 2130 hours, on [REDACTED] in [REDACTED], Arkansas.

Prior to the accident, the Storm was traveling south on [REDACTED] attempting to negotiate a left hand curve. The driver of the Storm stated that as he rounded the curve two pickup trucks were heading toward him traveling side-by-side. He took evasive action by applying his brakes. Evidence at the scene indicated the left front tire of the case vehicle skidded 97.25 ft. on the roadway. The vehicle traveled 36 ft. on the roadside before impacting the first group of small trees. The front bumper impacted at least three small trees in this area with the damage distributed across the entire frontal plane of the vehicle. The vehicle continued in the same direction for approximately 10 ft. to where it contacted a large pine tree in a sideswipe impact configuration. The right side of the vehicle sideswiped the tree and was slightly redirected counter-clockwise. The Storm traveled 19 ft. from the pine tree to impact with a large oak tree. At least two additional small trees were impacted between the two large tree impacts. At impact with the oak tree the vehicle was tracking straight. The right half of the front bumper contacted the tree resulting in bumper crush of 10.75 inches. EDCRASH computed a Delta V of 13.1 mph for this impact which was sufficient to deploy the airbag module.

Following impact with the oak tree the vehicle bounced back approximately 8 ft. and rotated clockwise. In all the vehicle traveled 151 ft. from where the initial skid mark began to its final rest position. The vehicle was 13.5 ft. west of the west road edge at final rest. The vehicle was disabled and a wrecker was called to tow the vehicle to a storage facility.

The driver was not restrained by his active lap and shoulder belt system when the accident occurred. He was not injured in the crash. He was sore and stiff the next day and went to a private physician for a check-up. He credits the airbag for preventing any serious injuries in this accident.

VEHICLE DAMAGE

Exterior:

The frontal plane of the airbag vehicle impacted several small trees after leaving the roadway. Direct damage from the small trees was distributed across the entire front bumper cover. This damage did not result in enough crush to measure and a Collision Deformation Classification of 12-FDEW-1 was assigned to this impact.

The next significant impact was with a larger tree. The right side of the vehicle sideswiped a pine tree. Damage was noted to the right front fender, right front tire and rim, right side door, right side mirror, and right rear quarter-panel from this impact. Again measurable resultant crush was too small to measure. A Collision Deformation Classification of 12-RDAS-1 was assigned to this sideswipe damage.

Following the sideswipe the vehicle was redirected counter-clockwise into another large tree. The frontal plane impacted the tree in the most severe impact in the collision sequence. Direct impact damage was located on the right half of the front bumper. Damage was noted to the bumper, bumper cover, right headlamp assembly, hood, and right front fender. Maximum residual crush was measured at the right front corner as 10.25 inches to the bumper. The crush measurements were as follows:

C1 = 3.25"	C2 = 2.5"
C3 = 3.25"	C4 = 5.0"
C5 = 7.5"	C6 = 10.25"

A Collision Deformation Classification of 12-FZEW-2 was assigned to this tree impact.

CDCs:

12-FDEW-1 (Several small trees)
12-RDAS-1 (Large tree)
12-FZEW-2 (Large tree)

Repair Cost:

Unknown

Interior:

The interior of the airbag vehicle sustained minor damage as a result of the airbag deployment. The steering wheel module cover separated at the designated perforations. No other damage to the airbag occurred. No occupant contact points were noted and no other interior damage occurred.

VEHICLE VELOCITY ESTIMATES

The barrier mode of the EDCRASH program was used to compute a change in velocity (Delta V) for the airbag vehicle's frontal impact with the large tree. The impacts with the smaller trees and the sideswipe impact are outside the scope of CRASH and were not calculated. The results of the computer generated Delta V for the deployment impact with the tree are as follows:

Total Delta V: 13.1 mph

Longitudinal Delta V: -13.1 mph

Lateral Delta V: 0.0 mph

COLLISION SEQUENCE**Pre-Impact:**

At approximately 2130 hours on [REDACTED], 1990, the GEO Storm was traveling south on [REDACTED] Road in [REDACTED] Arkansas. The driver was returning home from visiting a friend. In this vicinity the roadway curves to the drivers left with a degree of curvature of 15.7 degrees and a super-elevation of 6.8 percent. The road has a negative grade of 4.1 percent along the vehicle's path of travel. The roadway is a two lane unmarked road with a statutory speed limit of 30 miles per hour. The road was dry and the weather was clear at the time.

According to the driver, as he rounded the curve two vehicles were approaching from the opposite direction, traveling side-by-side. He applied his brakes and lost control of his vehicle and traveled off the right side of the roadway.

Impact:

Evidence at the scene indicates the left front tire of the case vehicle skidded 97.25 ft. on the roadway. The vehicle traveled 36 ft. on the roadside before impacting the first group of small trees. The front bumper impacted at least three small trees in this area with the damage distributed across the entire frontal plane of the vehicle.

The vehicle continued in the same direction for approximately 10 ft. to where it contacted a large pine tree in a sideswipe impact configuration. The right side of the vehicle sideswiped the tree and was slightly redirected counter-clockwise.

The Storm traveled 19 ft. from the pine tree to impact with a large oak tree. At least two additional small trees were impacted between the two large tree impacts. At impact with the oak tree the vehicle was tracking straight. The right half of the front bumper contacted the tree resulting in bumper crush of 10.75 inches. EDCRASH computed a Delta V of 13.1 mph for this impact which was sufficient to deploy the airbag module.

Post-Impact:

Following impact with the oak tree the vehicle bounced back approximately 8 ft. and rotated clockwise. In all the vehicle traveled 151 ft. from where the initial skid mark began to its final rest position. The vehicle was 13.5 ft. west of the west road edge at final rest.

Driver Activities:

The driver was not injured in the accident (he was sore and stiff the next day) and was able to exit the vehicle without assistance.

Police Activities:

A city police officer was dispatched to the scene at 2130 hours and arrived at 2144 hours. The vehicle was off the roadway at its final rest position so traffic control procedures were not necessary. Following acquisition of all pertinent accident data, the driver was issued a summons for speeding.

Rescue Activities: The driver did not require emergency medical attention, therefore an ambulance was not dispatched to the scene.

Scene Clearance: The Storm sustained disabling damage and was towed from the accident scene to a storage yard.

RELEVANT SAFETY ISSUES

Applicable Standards:

FMVSS 208:

Occupant Crash Protection in Passenger Cars, Multipurpose Passenger Vehicles, Trucks and Busses. This standard provides requirements for the installation of passive restraint systems in passenger vehicles. The Chevrolet GEO Storm was equipped with a Supplemental Inflatable Restraint (SIR) system, or airbag, for the driver position.

The airbag deployed as a result of the frontal impact with the tree. The system operated properly and effectively. The driver, who was not restrained by his active lap and shoulder belt system, sustained only minor injuries from the crash. He was sore and stiff from the impact, but did not report any other injuries. He credits the airbag for reducing his injuries. ° °

INVESTIGATOR DESCRIPTION: (Refer to vehicle by operator)

~~XXXXXXXXXX~~ THE, OPERATOR OF V-1, SAID THAT HE WAS DRIVING SOUTH ON ~~XXXX~~ ROAD, AND JUST AS HE ENTERED THE CURVE HE SAW TWO TRUCKS SIDE BY SIDE HEADING NORTH JUST INSIDE THE CURVE. V-1 SAID THAT HE HIT HIS BRAKES TO AVOID HITTING THE VEHICLES, BUT WHEN HE DID HE LOST CONTROL OF HIS VEHICLE AND HIT A TREE. ~~XXXXXXXXXX~~ MADE APPROX. 173 FEET OF SKID MARKS FROM THE TIME HE BRAKED FOR COLLISION. THERE WERE NO WITNESSES OR SUSPECT WHEN WE ARRIVE AT THE SCENE.

Delta V Not Calculated

- (4) At least one vehicle (which may be this vehicle) is beyond the scope of an acceptable reconstruction program, regardless of collision conditions.
- (5) All vehicles within scope (CDC applicable) of CRASH program but one of the collision conditions is beyond the scope of the CRASH program or other acceptable reconstruction techniques, regardless of adequacy of damage data.
- (6) All vehicles and collision conditions are within scope of one of the acceptable reconstruction programs, but there is insufficient data available.

LOCATOR

Locate the end of the damage with respect to the vehicle longitudinal center line or bumper corner for end impacts or an undamaged axle for side impacts.

Specific Impact No.	Location of Direct Damage	Location of Field L	Location of Maximum Crush
1	FRONT BUMPER	BUMPER	RIGHT END OF BUMPER

CRUSH PROFILE

NOTES: Identify the plane at which the C-measurements are taken (e.g., at bumper, above bumper, at sill, above sill, etc.) and label adjustments (e.g., free space).

Measure C1 to C6 from driver to passenger side in front or rear impacts and rear to front in side impacts.

Free space value is defined as the distance between the baseline and the original body contour taken at the individual C locations. This may include the following: bumper lead, bumper taper, side protrusion, side taper, etc. Record the value for each C-measurement and maximum crush.

Use as many lines/columns as necessary to describe each damage profile.

MANUAL RESTRAINTS

NOTES: Encode the applicable data for each seat position in the vehicle. The attributes for the variables may be found below. Restraint systems should be assessed during the vehicle inspection then coded on the Occupant Assessment Form.

If a child safety seat is present, encode the data on the back of this page.

If the vehicle has automatic restraints available, encode the appropriate data on the back of the previous page.

CHILD SAFETY SEAT FIELD ASSESSMENT

When a child safety seat is present enter the occupant's number in the first row and complete the column below the occupant's number using the codes listed below. Complete a column for each child safety seat present.

Occupant Number						
1. Type of Child Safety Seat						
2. Child Safety Seat Orientation						
3. Child Safety Seat Harness Usage						
4. Child Safety Seat Shield Usage						
5. Child Safety Seat Tether Usage						
6. Child Safety Seat Make/Model	Specify Below for Each Child Safety Seat					

1. Type of Child Safety Seat

- (0) No child safety seat
 (1) Infant seat
 (2) Toddler seat
 (3) Convertible seat
 (4) Booster seat
 (7) Other type child safety seat (specify):

- (8) Unknown child safety seat type
 (9) Unknown if child safety seat used

NATIONAL ACCIDENT SAMPLING SYSTEM
CRASHWORTHINESS DATA SYSTEM

Primary Sampling Unit Number NCSI

Interviewee(s) Role(s) or Name(s) DRIVER

Case Number—Stratum 10-05

Vehicle Number 01

Review the Interview Cue Sheet prior to conducting interview(s) to ensure the acquisition of all pertinent data.

GENERAL DESCRIPTION OF ACCIDENT SEQUENCE

CORNER FROM FRIENDS HOUSE - GOING AROUND
CURVE - TWO TRUCKS RACING SIDE BY SIDE
CURVE IN OPPOSITE DIRECTION - HIT HIS BRAKES
CONTROL - WENT THROUGH WOODS AND HIT SEVERAL
TIMES - THEN A LARGE ONE

SPECIFIC QUESTIONS

Key to Researcher: Have you obtained the following through the interviewee(s) description and specific questions?

- ☐ PRE-CRASH, AT IMPACT
vehicle travel/driver intention
☐ Direction of travel
☐ Avoidance maneuvers
☐ Impact description/orientation

- ☐ Speed estimates (precrash/at
impact)
☐ Post-impact trajectory
☐ Door status (precrash/postcrash)
☐ Final rest position

- ☐ Previous vehicle damage
☐ Glazing type
☐ Vehicle glazing status
☐ PAR clarifications
☐ Glove box status

Cargo? No ☒ Yes ☐ Interviewee's Estimated Cargo Weight _____

Description of Cargo _____

Present Location of Vehicle (if not yet inspected)? _____
